1. Explain the difference between Relative, Absolute and Mixed Cell Referencing.

Relative Cell Reference

A relative cell reference changes automatically when a formula is copied from one cell to another.

Explain the difference between Relative, Absolute and Mixed Cell Referencing.				
Vehicle	Price	Relative	Absolute	Mixed
Car	500000	510500	510500	500000
Bicycle	10500		510500	10500
Auto-Rickshaw	25000		510500	25000

Absolute Cell Reference

An absolute cell reference remains fixed when copied to another cell. Dollar signs (\$) are used to lock the row and column.

Mixed Cell Reference

A mixed cell reference locks either the row or the column only.

2. Write a formula to calculate the total sales of Car and Bicycle only.

Vehicle	Price
Car	500000
Bicycle	10500
Auto-Rickshaw	25000
CAR & BICYCLE	510500

=SUM(B11:B12)

3. Using the data below, write a formula to calculate the average sales of items priced above 100 but less than 300.

A	B	C
Item	Price	Sales
Item A	90	1000
Item B	150	1200
Item C	250	1500

=AVERAGEIFS(C19:C21,B19:B21,">100",B19:B21,"<300")

4. Count how many customer names are recorded.

=COUNTA(B2:B51) - 50
